

Digital Literacy Project Report

Student: Diksha Yadav | **Registration:** 25BAI11339

Program: B.Tech CSE AI ML | **Year:** 1st Year

Course: CSE0001 Digital Literacy | **Date:** March 30, 2026

Project Overview

In today's digital world, having basic digital literacy skills is essential for students. This project was designed to help us understand how to effectively use digital tools, communicate professionally, and stay safe online. As a student digital ambassador, I explored various platforms and created resources that can help others navigate the digital environment responsibly.

Through this project, I worked on tasks such as designing an infographic, building a professional online presence, practicing coding, creating a quiz, learning email etiquette, and understanding cybercrime. Each task helped me gain practical knowledge and improved my confidence in using digital technologies.

Practical Skills

Hands-on experience with essential digital tools and platforms

Online Safety

Understanding cyber threats and protective measures

Professional Growth

Building digital presence for academic and career success

Task 1: Infographic Design

For Task 1, I created a digital literacy awareness infographic using Canva. The infographic focused on explaining what digital literacy means, the importance of safe internet practices, and the role of professional online presence for students. I used simple visuals, icons, and short text to make the content easy to understand and visually appealing.

01

Define Content

Identified key topics: digital tools, safe browsing, and online identity

02

Select Template

Chose clean Canva template with balanced layout and colors

03

Add Visuals

Incorporated icons and images to enhance understanding

04

Refine Design

Balanced text and visuals for optimal readability

One challenge I faced was selecting the most important information to include without overcrowding the design. It required careful thinking to balance visuals and content. Overall, this task helped me understand how to communicate information effectively through design and how visuals can make learning more engaging.

Task 2: Professional Profiles

GitHub Profile

Created profile to showcase technical projects and manage repositories. Learned basics of version control and collaborative coding practices.

- Set up professional profile
- Learned repository management
- Prepared for future projects

LinkedIn Profile

Updated education details and built professional network. Understanding its role in career opportunities and industry connections.

- Completed education section
- Added academic achievements
- Connected with professionals

Create Profiles

Set up accounts with complete information

Regular Updates

Add projects and achievements quarterly

Build Network

Connect with peers and professionals

These platforms serve different purposes—GitHub is mainly for sharing technical work, while LinkedIn helps in building professional connections. In the next four years, I plan to regularly update my profiles with projects, achievements, and skills. This will help me build a strong portfolio and improve my chances of getting internships and job opportunities.

Task 3: Coding & Collaboration

1

HackerRank Platform

Created account and completed beginner-level problems to understand coding platform functionality and improve problem-solving skills

2

Google Forms Quiz

Built Digital Literacy Quiz with multiple-choice and short answer questions to test knowledge and engagement

3

Data Analysis

Viewed responses in Google Sheets to understand data collection, organization, and analysis methods

This task was very useful as it introduced me to platforms that are widely used in academics and industry. Coding platforms will help me practice regularly and improve my programming skills, while tools like Google Forms are useful for surveys and data collection. Overall, this task enhanced my practical understanding of digital tools.

Task 4: Email Etiquette

In this task, I learned about professional email communication and etiquette. Poor communication can lead to misunderstandings and missed opportunities. For example, if a student sends an email without a proper subject or uses an informal tone, it may be ignored by the professor or recruiter.

Clear Subject Line

Always include specific, descriptive subject that summarizes email purpose

Professional Tone

Use polite language, proper greetings, and formal structure throughout

Proper Structure

Follow standard format: greeting, body, closing, and signature

To avoid such situations, emails should always have a clear subject line, polite language, and proper structure. I practiced writing professional emails and understood the importance of clarity and respect in communication. This task helped me improve my writing skills and made me more confident in communicating formally.

Task 5: Cybercrime Awareness

While working on the cybercrime task, I learned about online threats such as phishing and financial fraud. What surprised me most was how easily people can be tricked into sharing sensitive information through fake messages or links.

Phishing Attacks

Fraudulent messages designed to steal passwords, credit card numbers, and personal information

Financial Fraud

Unauthorized transactions and payment scams targeting online banking and shopping

Identity Theft

Stolen personal information used to impersonate victims and commit crimes

I realized that many cybercrimes happen due to lack of awareness. As a result, I will be more careful while clicking links, sharing personal information, and making online payments. I will also verify sources before trusting any message. This task made me more aware and responsible as a digital user.

Key Learnings

Digital Tools

Mastered essential platforms like Canva, GitHub, LinkedIn, and Google Forms

Professional Communication

Learned email etiquette and formal business correspondence

Online Safety

Understood cyber threats and protective measures for digital security

Professional Growth

Built digital presence to support academic and career advancement

Project Impact & Future Plans

This project helped me develop important digital literacy skills that are essential in today's world. I learned how to use digital tools, communicate professionally, and stay safe online. Each task provided practical experience and improved my confidence in handling digital platforms.

Overall, this project was very informative and useful. It not only enhanced my technical knowledge but also made me more responsible as a digital citizen. I believe these skills will be beneficial for my academic and professional journey in the future.

Future Goals

- Continue updating GitHub with coding projects
- Expand LinkedIn network with industry professionals
- Practice coding problems weekly on HackerRank
- Apply digital safety practices in daily online activities

References

Design Tools

- Canva for infographic creation
- Google Forms for quizzes

Professional Platforms

- GitHub for coding repositories
- LinkedIn for professional networking

Learning Resources

- HackerRank for coding practice
- Cyber Crime Portal (cybercrime.gov.in)

Additional resources include official documentation from platform websites, cybersecurity guidelines from government portals, and digital literacy best practices from academic sources.
